MUNICH NLP

mAIkers COMMUNITY

fortiss

Welcome

Program starts at 18:30

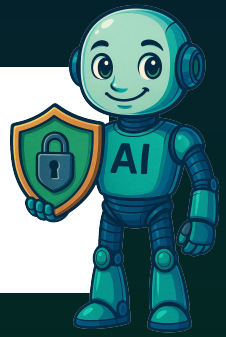

Let's exchange on Slack

Follow us on Linkedin

appliedAI institute for europe

appliedAI Developers

Engineers, researchers, and tech leaders solving real-world production AI challenges.
We run techie-to-techie meetups to share hard learned lessons and what actually works when shipping AI at scale.

What we value?

- making AI development clear
- connecting technical stories

with real impact

Get involved:

- share your lessons learned & challenges
- network with inspiring developers

Grow with us:

- host a meetup
- share the knowledge
- expand your skill set

Agenda

appliedAI Developers

18:30 – 18:50	Arrival & mingle
18:50 – 19:00	Opening: framing the core question
19:00 – 19:20	🔬Keynote: Oversight Is Not a Button.
19:20 – 19:50	🍕Slice-breaker
19:50 – 20:05	🦾Demo Tour lens: adaptive robot / neuromorphic gesture interface
20:05 – 20:55	🧩World Café Challenge
20:55 – 21:00	Closing: the oversight layer, synthesised
21:00 – 22:00	Networking 🍕

Why this series exists

Most AI events focus on:

- models
- tools
- demos
- benchmarks

Nexus focuses on:

- production failures
- architectural patterns
- tradeoffs
- what actually breaks after the demo works

Goal: build a production readiness blueprint for agentic systems.

appliedAI Developers

Production Readiness Blueprint

1. Context — what the system sees
2. Behavior — how it decides
3. Execution — how it acts
4. State — what it remembers
5. Collaboration — how humans stay in control
6. Observability
7. Security
8. Learning & Adaptation
9. Scaling, Performance & ROI

Attendee profile

- AI engineers / agent builders
- ML researchers and students
- software architects
- product leads
- consultants
- robotics / continual learning / neuromorphic researchers
- regulated-industry practitioners
- founders and startup builders

Where oversight matters most

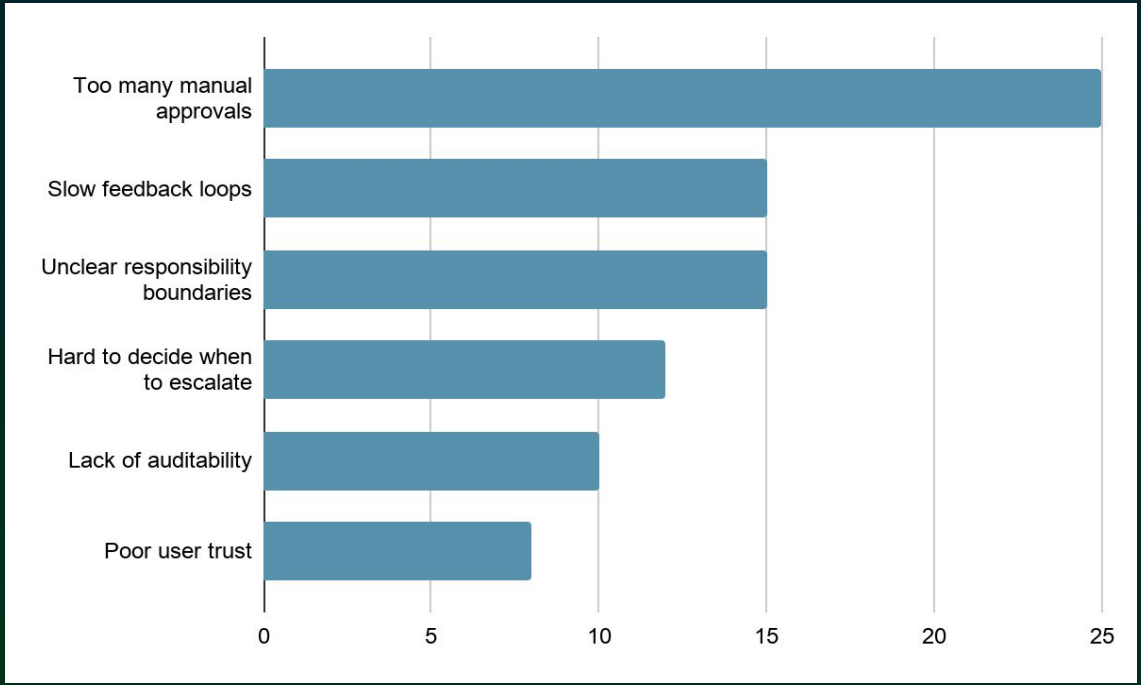

Oversight is seen primarily as a risk-control and correction mechanism.

appliedAI institute for europe

appliedAI Developers

Biggest HITL design challenge

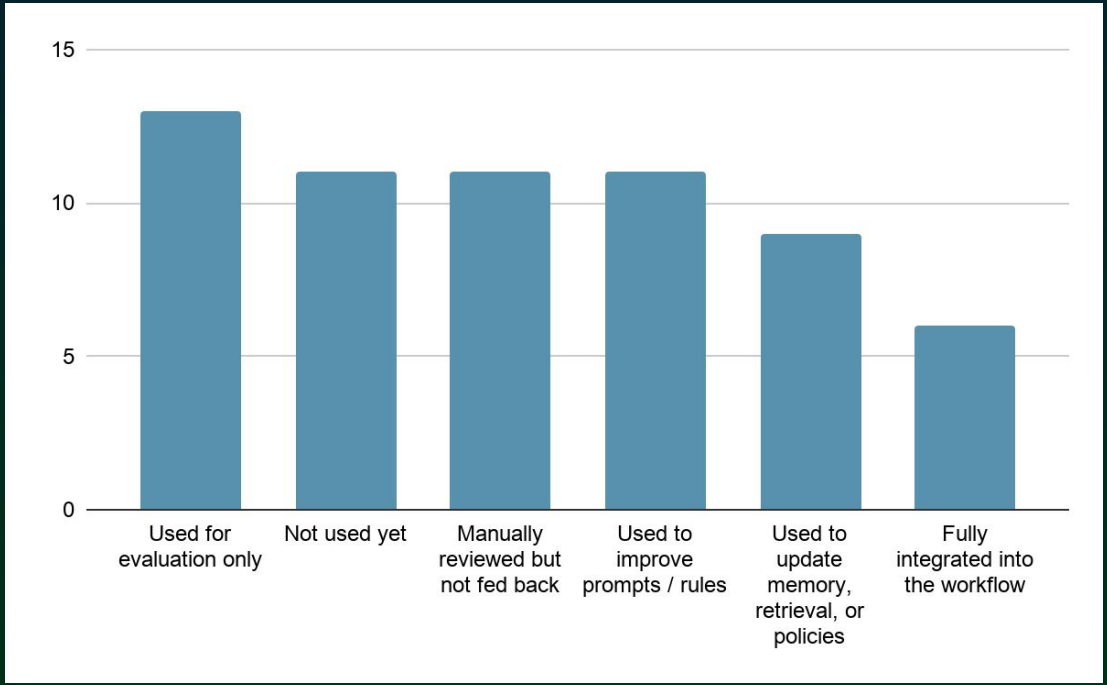

The core tension is control without overload

appliedAI institute for europe

appliedAI Developers

How feedback is currently used

Many systems have human review.
Fewer have human feedback loops.

Challenge

Control Without Overload:
Designing Human Oversight for Adaptive AI Systems

appliedAI
institute
for europe

appliedAI Developers

How can an AI system learn from humans and act more autonomously, without creating false confidence, bottlenecks, or unclear accountability?

Tables:

1. **Control & Consent** — when learning is allowed
2. **Safety Boundaries** — what must never adapt automatically
3. **Feedback & Correction** — how feedback becomes system improvement
4. **Accountability & Traceability** — who can explain what changed and why

appliedAI Developers

The bridge to AI agents

Robotics / demo	AI agents equivalent
Robot adapts from operator gestures	Agent adapts from user feedback
Federated learning on edge devices	Local / distributed learning without centralizing sensitive data
Human controls when adaptation happens	Human approval before policy/memory update
Safety boundaries around robot behavior	Guardrails around tool use and irreversible actions
Continual learning	Memory, skills, personalization, feedback loops
Traceable adaptation	Auditable agent behavior changes

appliedAI Developers

Closing Synthesis: Oversight as Control architecture, but without Overload

Challenges:

1. Review bottlenecks
2. Unclear escalation
3. False confidence from approval gates
4. Feedback not captured
5. Accountability

How can an AI system learn from humans and act more autonomously, without creating false confidence, bottlenecks, or unclear accountability?
